Dear Mr. Gaude,

Re: NuSil Technology Silicone Gel Products

French regulatory authorities recently reported that a manufacturer of silicone gel-filled mammary implants, Poly Implant Prosthesis (PIP), allegedly manufactured devices using industrial-grade silicone gel.

NuSil Technology manufactures only the highest quality medical-grade silicone materials available domestically and internationally for use in medical implants that are approved by the United States Food and Drug Administration and other international regulatory authorities. Master files for our medical-grade silicone products are maintained with the FDA and other international regulatory agencies.

NuSil Technology does not manufacture or supply industrial-grade silicone materials for use in the manufacture of medical implants, and NuSil was not the supplier of any industrial-grade materials to PIP. We have no information regarding the industrial-grade silicone materials used by PIP. All questions relative to PIP's actions should be directed to the appropriate authorities.

We maintain our commitment to supplying the highest quality medical-grade silicone materials available in the world. These materials are produced under the strict control of our Quality System, compliant with ISO 9001:2008 and select sections of ISO 13485:2003 and 21 CFR Part 820 Quality System Regulation (cGMPs).

Sincerely,

A handwritten signature in black ink, appearing to read "R. Compton". The signature is stylized and cursive.
